USFQ is a liberal arts university in Quito-Ecuador. The USFQ purpose is to achieve academic excellence through integrating the humanities and liberal arts.

The Design Lab (DLab) is a space for research and creation of projects through prototyping.

The DLab seeks to provide the knowledge that prepares all disciplines in various areas of future professionals, providing tools such as digital manufacturing, materials, and technologies applied to the creation of products and services including the use of virtual reality, data visualization, and artificial intelligence.

**Biotextile products development at the Design Lab (DLab)**
Areas of focus: product development, biocompatibility

The location of this internship would be at the DLab USFQ based on the campus of Cumbaya/Quito.

The student taking this role would have to make proposals for ongoing multidisciplinary research-led projects. Prototyping is the basis for the process on material research, architectural, and environmental design projects; communication & lab processes.

The team consists of a multidisciplinary team of designers, artists, mechanical, chemical and environmental engineers, communications, and biologists.

The ideal candidate should be open to work with various disciplines. This is a hands-on internship, the student candidate should be willing to explore, propose, and be active on the Lab.
