USFQ is a liberal arts university in Quito-Ecuador. The USFQ purpose is to achieve academic excellence through integrating the humanities and liberal arts.

**Andean food product development and production**
Areas of focus: product development, costing, feasibility & manufacturing strategies, food chemistry

The location of this Food Product Development and Production internship would be at the pilot plant of Food Engineering based on the campus of Cumbaya/Quito.

The student taking this role would have to work towards developing products which can be manufactured in the food pilot plant facilities of the university. The main focus will be on chochos, quínoa, papas yanashungo and other types of Andean products.

The ideal candidate should have a basic understanding of food science and chemistry. The student should be motivated to explore and create products for the Ecuadorian market.

The team consists of the food engineering faculty of University San Francisco. Direct contact and reporting would be to the pilot plant manager.

USFQ will help arranging homestays for the student so that students can fully immerse in the Ecuadorian Culture.
