Dryfarming of organic tomato and potato – participation in field and lab experiments. The student will visit organic farms, plan and carry out experiments. This internship contains field work, insect sampling and microscopic investigations in the lab. The student will work alongside a friendly and hardworking group of PhD and MSc students. Scientific support and transportation provided.

Szent István University can provide accommodation in the student hostel on campus.

Exchange students will be members of Szent István University’s 10% international student body (about 1300 students). There are several cultural, leisure and social activities where students can enjoy living in a central European country in a very international environment.

**Suggested Majors:**
Ag Sci/Bio/Plant Sci
