The focus, Insights to Zoology in a Changing World, is offered in the Zoology and Animal Ecology department at Szent István University. The department’s professional interest covers a broad range within the world of animals from terrestrial worms through various arthropod groups (mainly decomposers and pollinators) to spectacular bird species. Students will be provided consultative and orientative support, guidance through laboratory and field work sessions.

Students are offered several options to participate in field and laboratory activities, including scientific and public events.

Szent István University can provide accommodation in the student hostel on campus.

Exchange students will be members of Szent István University’s 10% international student body (about 1300 students). There are several cultural, leisure and social activities where students can enjoy living in a central European country in a very international environment.
