The Tata-Cornell Institute for Agriculture and Nutrition (TCI) is a long-term research initiative focusing on the design and evaluation of innovative interventions linking agriculture, food systems, human nutrition, and poverty in India. The Tata-Cornell Institute is part of the College of Agriculture and Life Sciences and are hosted by the Charles H. Dyson School of Applied Economics and Management. The institute also has satellite offices in Mumbai and New Delhi, as well as multiple active field research locations across rural India.

Interns will be based out of TCI-TARINA's Delhi office or with one of the TCI partners (PRADAN, ICRISAT, GDS or BIAF) located in the states of Orissa, Bihar, Telangana or Uttar Pradesh or assisting graduate students with their fieldwork. Interns based in the field with our partners or in the Delhi office will have predetermined deliverables and resources and support to carry them out. They will be given the freedom to plan their work.

Knowledge of both quantitative and qualitative techniques will be useful during the internship. One-on-one sessions will be held with the chosen intern to match their interest and skill with their internship tasks. Students will work under an assigned mentor at the TCI-TARINA office/partner organization.

TCI staff will secure housing in the appropriate location matched to the student’s internship.
