Cornell Cooperative Extension is a critical piece of CALS’ ability to serve the public. CCE puts knowledge to work in pursuit of economic vitality, ecological sustainability and social well-being.

With a presence in every county and New York City, CCE puts research into practice by providing high-value educational programs and university-based resources that help solve problems in our communities. CCE’s regional agriculture teams provide research-based information, programs, and technical assistance to dairy, field crops, vegetable, tree fruit and grape producers all around the state.

CCE brings together local experience with cutting edge, evidence-based solutions to help New York state families and communities thrive in our rapidly changing world.
Cornell CALS supports and maintains more than 20 field stations on campus and around the State of New York. These serve as field research facilities for our many ongoing research, education and outreach initiatives.
Cornell CALS has been a leader in international agricultural and rural development for much of the past century. Our focus is on purpose-driven research, education and outreach and the pursuit of knowledge for public good. Over the years, faculty programs targeting agriculture and nutrition, poverty and the environment have contributed to Cornell's remarkable reputation in the global arena. Our researchers are currently engaged in all but a handful of the world's countries and on six of the seven continents.

Much of this programming falls under CALS International Programs (IP-CALS), which works to address fundamental challenges of development and food security.

In addition to IP-CALS, the college has built and continues to develop an extensive international network of funded research projects, internships, fellowships and training programs.
