Cornell Cooperative Extension is a critical piece of CALS’ ability to serve the public. CCE puts knowledge to work in pursuit of economic vitality, ecological sustainability and social well-being.

With a presence in every county and New York City, CCE puts research into practice by providing high-value educational programs and university-based resources that help solve problems in our communities. CCE’s regional agriculture teams provide research-based information, programs, and technical assistance to dairy, field crops, vegetable, tree fruit and grape producers all around the state.

CCE brings together local experience with cutting edge, evidence-based solutions to help New York state families and communities thrive in our rapidly changing world.
Cornell CALS supports and maintains more than 20 field stations on campus and around the State of New York. These serve as field research facilities for our many ongoing research, education and outreach initiatives.
A critical piece of our commitment to purpose-driven science is putting our knowledge and research to work to make a positive impact. Students and faculty go beyond the boundaries of campus, partnering with communities to explore ideas and solve difficult, complex problems.

Cornell CALS is home to several world-class outreach and extension programs that directly serve the public, sharing knowledge and research throughout our state, nation and in almost every country in the world.

Foundational to this development, International Programs in the College of Agriculture and Life Sciences (IP-CALS) meets the fundamental challenges of development and food security through teaching, research and outreach programs that involve undergraduates, graduate students, faculty and mid-career professionals.

With innovative projects and degree programs that focus on food, agriculture and development, IP-CALS produces leaders who positively and sustainably improve global food security.
