COURSE CATALOG

Assisting farms and food businesses in New York State and beyond to improve product quality, safety, nutrition, and marketability.
The Department of Food Science at Cornell University is one of the premier programs worldwide for collaborative research and extension programming. Our faculty, staff, and students support cutting-edge research in chemistry, microbiology, engineering, biotechnology, nutrition, and physiology, which has improved the nutritional value, safety, quality, affordability, and profitability of foods and beverages. These research initiatives are integrated with translational extension efforts that together help improve public health and stimulate business development.

The mission of the food science extension programs at Cornell is to assist farms and food businesses in New York State and beyond with the implementation of new technologies and production strategies that will improve product quality, safety, nutrition, and marketability. Extension personnel, located at the Cornell University Campus in Ithaca, NY and at Cornell AgriTech in Geneva, NY, facilitate these activities through technology transfers, process validations, project incubation, piloting, crisis management support, workshops and web-based training, and consultation.

Through our work in research and extension, the food science extension programs have helped tens of thousands of food industry stakeholders. Measurable outcomes for these interactions have included bringing products to market, achieving regulatory compliance, reducing food safety risks, and adding value or extending product lines.

Good Manufacturing Practices (GMPs) Part 117 Online Course

Offered by the IFS@CU

Online (Self-Paced) – The GMPs Online Course is designed to review the requirements of Part 117, Subpart B—Current Good Manufacturing Practice in Title 21 of the U.S. Code of Federal Regulations. The regulation outlines the basic sanitary controls that are required for all food processing plants, wholesale or distribution firms, and warehouses or food storage facilities that handle, store or process FDA-regulated food. The course provides the text of each section of this regulation along with an explanation of its intent, examples and strategies for compliance with these requirements, as well as additional resources. See page 5 or visit the IFS@CU website for more information.

Implementing SQF Systems Course

Offered by Dairy Foods Extension

3 Day Course – This workshop is designed to give participants an understanding of the SQF Code, how to implement requirements in food production, manufacturing, storage, distribution, or packaging to achieve or maintain SQF Certification. It is required that students have completed a HACCP Course of at least 16 hours prior to taking this course. Visit the Dairy Foods Extension website for more information.

Produce Safety Alliance Grower Training Course (Basic Level)

Offered by the PSA

1 Day, 2 Half-Day, or 3-Week Online (Self-Paced) Course – This course is one way to satisfy the FSMA Produce Safety Rule requirement outlined in § 112.22(c). The course will provide a foundation of Good Agricultural Practices (GAPs) and co-management of natural resources and food safety, FSMA Produce Safety Rule requirements, and details on how to develop a farm food safety plan. After attending the course, participants will receive a certificate from the Association of Food and Drug Officials (AFDO) verifying completion of the course. See page 10 or visit the PSA website for more information.

Intentional Adulteration Vulnerability Assessments (IAVA)

Offered by Dairy Foods Extension

1 Day Course – This course will provide participants with the knowledge to implement the requirements of conducting a vulnerability assessment under the Mitigation Strategies to Protect Food Against Intentional Adulteration (IA) regulation of the U.S. Food and Drug Administration (FDA). This regulation is one of a number of regulations and guidance that implement the provisions of the 2011 Food Safety Modernization Act (FSMA), which focuses on safe food practices. See page 48 or visit the Dairy Foods Extension website for more information.
Better Process Control School

Offered by the CFVC

2 or 4 Day Course – A training program for the processed food industry to prepare industry practitioners and help companies meet federal regulations. The course is beneficial to personnel in plants that pack and thermally process low-acid and acidified foods in hermetically sealed containers for shelf stable conditions. This includes canned foods, aseptically processed and packaged foods, and pickled products. Cornell University is part of the network of universities that deliver the Better Process Control School in partnership with the Consumer Brands Association (CBA) utilizing U.S. Food and Drug Administration (FDA) approved curriculum. See page 27 or visit the CFVC website for more information.

FSMA Preventive Controls Qualified Individual Training*

Offered by Dairy Foods Extension

3 Day Course – The Current Good Manufacturing Practice, Hazard Analysis, and Risk-Based Preventive Controls for Human Food regulation is intended to ensure safe manufacturing/processing, packing and holding of food products for human consumption in the United States. The regulation requires that certain activities must be completed by a preventive controls qualified individual who has successfully completed training in the development and application of risk-based preventive controls. This course developed by the FSPCA is the standardized curriculum recognized by FDA; successfully completing this course is one way to meet the requirements for a preventive controls qualified individual. These courses are taught by Lead Instructors trained by the FSPCA, who have been instructed in how to teach the FDA-recognized standardized curriculum. Visit the Dairy Foods Extension website for more information.

*Course description provided by the Food Safety Preventive Controls Alliance.

Foreign Supplier Verification Programs

Offered by Dairy Foods Extension

2 Day Course – This course will provide participants with the knowledge to implement the requirements of the “Foreign Supplier Verification Programs (FSVP) for Importers of Food for Humans and Animals” regulation of the U.S. Food and Drug Administration (FDA). This regulation is one of a number of regulations and guidance that implement the provisions of the 2011 Food Safety Modernization Act (FSMA), which focuses on safe food practices. This course is designed for U.S. based importers who meet the definition of “importer” in the FSVP rule, which includes those who own or are the consignee of food at the time of entry, or, if no owner or consignee exists, the U.S. agent or representative of the foreign owner. See page 48 or visit the Dairy Foods Extension website for more information.
Institute for Food Safety at Cornell University

The Institute for Food Safety at Cornell University (IFS@CU) is unique in its comprehensive approach for addressing current and emerging food safety issues. Harnessing Cornell’s existing strengths across food production systems, the IFS@CU integrates extension, training, and research to prevent foodborne illnesses in innovative and pioneering ways, optimizing product quality and safety from farm-to-table.

The IFS@CU provides training and support to help growers and processors overcome food safety challenges such as complying with regulatory requirements in the U.S. FDA’s Food Safety Modernization Act (FSMA). Located at the College of Agriculture and Life Sciences’ Cornell AgriTech in Geneva, New York, the IFS@CU collaborates with a diversified network that supports the food production industry to stimulate economic growth and create new market opportunities for the Empire State’s farmers, food processors, retailers, and food entrepreneurs. Visit the IFS@CU’s website to learn more about the programming it offers.

Good Manufacturing Practices (GMPs)  
Part 117 Online Course

Tuition: $200 | 12 Weeks to Complete

Online (Self-Paced) - This course reviews the requirements of Part 117 Subpart B – Current Good Manufacturing Practice in Title 21 of the U.S. Code of Federal Regulations. Course modules examine basic sanitary controls that are required for all food processing plants, wholesale or distribution firms, and warehouses or food storage facilities that handle, store or process FDA-regulated food.

Curriculum Overview

The course consists of 12 modules (listed below). Students have 12 weeks to review the modules at their own pace. Each module concludes with a quiz, which students must complete to test their knowledge. After submitting all 12 quizzes, students will receive a Certificate of Course Completion issued by the IFS@CU.

- **Module 1:** GMP Regulation & Training
- **Module 2:** Food Safety – Microbes & Allergens
- **Module 3:** Personnel – Health & Hygiene
- **Module 4:** Plant Grounds & Pest Control
- **Module 5:** Plant Construction & Design
- **Module 6:** Sanitary Facilities – Water, Plumbing & Toilets
- **Module 7:** Sanitary Operations – Cleaning & Sanitizing
- **Module 8:** Equipment & Utensils
- **Module 9:** Plant Operations & Raw Materials
- **Module 10:** Manufacturing Operations – Process Controls
- **Module 11:** Warehousing, Food Disposition & Defects
- **Module 12:** Building Sanitation Procedures

Who Should Take This Course?

This course is intended for supervisors, middle-level managers, quality control personnel, and those responsible for ensuring that food processing, wholesale and warehouse operations, or other facilities, meet current GMP requirements.
Course Registration

The course fee is $200 (subject to change), which is payable by credit card or check. Group discounts are available for groups with 20 or more participants.

Please direct inquiries about the course to Nancy Long (ifstraining@cornell.edu).

Register for the course at: instituteforfoodsafety.cornell.edu/gmps-117

Intentional Adulteration Vulnerability Assessments (IAVA)

Tuition: $650–$880 | June 7

1 Day Course, On-Campus* – Taught by Food Safety Preventive Controls Alliance (FSPCA) IAVA Lead Instructors, participants in this course learn to conduct vulnerability assessments using the Three Fundamental Elements method or a hybrid approach that uses a modified Key Activity Types (KAT) method.

*May move to remote delivery depending on University's operating status and the spread of COVID-19 at the time the course is offered.

Curriculum Overview

The Mitigation Strategies to Protect Food Against Intentional Adulteration regulation (referred to as the “IA regulation”) is intended to protect food from acts of intentional adulteration. This regulation is one of a number of regulations and guidance that implement the provisions of the 2011 Food Safety Modernization Act (FSMA), which focuses on safe food practices. The “IA regulation” requires that certain activities must be completed by a “food defense qualified individual.” This participant course, developed by the Food Safety Preventive Controls Alliance (FSPCA), is one of the “standardized curriculum” courses recognized by FDA; successfully completing this participant course is one way to meet the requirements for conducting a vulnerability assessment by a “qualified individual.”

Who Should Take This Course?

Food industry professionals who conduct vulnerability assessments using the Three Fundamental Elements method or a hybrid approach that uses a modified Key Activity Types (KAT) method should take this course. It is important to note that the IA rule does not specify a particular method you must use to conduct your vulnerability assessment. If you conduct your vulnerability assessment using the KAT method with no modifications, you should consider completing the FSPCA IA Conducting Vulnerability Assessments Using Key Activity Types course and may not need the training provided in this course.

Course Registration

This course is being offered in collaboration with the Dairy Foods Extension Program. Please visit the Dairy Foods Extension Program’s website to register for this course.
IFS@CU | Course Information

**Current Good Manufacturing Practices Part 111 Online Course**

**Coming in 2022 | 16 Weeks to Complete**

**Online (Self-Paced)** – This online course reviews the requirements of Part 111– Current Good Manufacturing Practice in Manufacturing, Packaging, Labeling, or Holding Operations for Dietary Supplements in Title 21 of the U.S. Code of Federal Regulations. Course modules examine basic sanitary, production, process, and quality controls that are required for all facilities that manufacture, package, label, or hold FDA-regulated dietary supplements. The course also reviews sections of the Part 117 Subpart B – Current Good Manufacturing Practice relevant to the production of dietary supplements.

**Curriculum Overview**

Students have 16 weeks to review course modules at their own pace. Modules cover the following topics: food safety; personnel; pest management; plant design; sanitary design of facilities, equipment and utensils; cleaning and sanitizing; production and process controls; quality control; written procedures; and record-keeping. Participants must complete and pass the quiz questions that are posted throughout the curriculum. After completing all of the modules and the quiz questions, students will receive a Certificate of Course Completion issued by the IFS@CU.

**Who Should Take This Course?**

This course is intended for supervisors, middle-level managers, quality control personnel, and those responsible for ensuring that manufacturing, packaging, labeling, or holding dietary supplements meet current GMP requirements.

**Course Registration**

This course is being launched in 2022. Join the IFS@CU mailing list to receive notification of when the course will be offered as well as other events offered by the IFS@CU or visit the IFS@CU's website for updates.

**VIEW FULL KEY ON PAGE 35**
The Produce Safety Alliance (PSA) was created to help fresh produce growers meet the regulatory requirements included in the Food Safety Modernization Act (FSMA) Produce Safety Rule. It was established through a cooperative agreement between Cornell University, the United States Food and Drug Administration (FDA), and the United States Department of Agriculture (USDA). The PSA has developed two types of training courses; the PSA Grower Training Course and the PSA Train-the-Trainer Course. The PSA began offering both courses in September 2016 and has trained nearly 72,000 produce growers and over 3,300 trainers in the United States and internationally.

Meet the Team

**Elizabeth Bihn, PhD**
PSA Director & Sr. Extension Associate, IFS@CU Executive Director, Based in Geneva, New York

The Produce Safety Alliance will be hiring a new team member in 2022 to fill the PSA Southwest Regional Extension Associate position. Visit the PSA website for their contact information in the near future.
The PSA Grower Training Course was created through a five-year nationwide curriculum development process. In 2011, after hosting an international gathering to review current Good Agricultural Practices (GAPs) educational resources, the PSA launched ten open Working Committees (WCs), composed of one hundred seventy-eight members from academia, the grower community, the produce industry, and regulatory agencies. The WCs identified key priority areas and learning objectives to be addressed in the grower curriculum. Additionally, grower preferences regarding produce safety training programs were collected through eight farmer focus groups nationwide, collecting feedback from eighty-nine fruit and vegetable growers. Beginning in the fall of 2015, the PSA engaged with the FDA Division of Produce Safety staff to align the seven module PSA Grower Training Course with the final FSMA Produce Safety Rule requirements, incorporating the regulatory language throughout the curriculum modules and teaching notes.

The PSA Train-the-Trainer Course has been designed to prepare educators to deliver the PSA Grower Training Course to produce growers and become PSA Trainers or PSA Lead Trainers. During the two-day PSA Train-the-Trainer Course, attendees will have the opportunity to experience all seven PSA Grower Training Course modules, and learn more about conducting effective trainings for growers.

More detailed information about both PSA Train-the-Trainer and PSA Grower Training Courses, including dates and locations of courses scheduled, can be found on the Produce Safety Alliance Website at: producesafetyalliance.cornell.edu

Produce Safety Alliance Grower Training Course (Basic Level)

1 Day, 2 Half-Day, or 3-Week Online (Self-Paced) Course – This course is one way to satisfy the FSMA Produce Safety Rule requirement outlined in § 112.22(c): ‘At least one supervisor or responsible party for your farm must have successfully completed food safety training at least equivalent to that received under standardized curriculum recognized as adequate by the Food and Drug Administration.’ The course will provide a foundation of Good Agricultural Practices (GAPs) and co-management of natural resources and food safety, FSMA Produce Safety Rule requirements, and details on how to develop a farm food safety plan. After attending the course, participants will receive a certificate from the Association of Food and Drug Officials (AFDO) verifying completion of the course.

Learning Outcomes

• Understand microorganisms relevant to produce safety and where they may be found in the farm environment
• Identify microbial risks and potential routes of contamination, practices that reduce risks, and how to begin implementing produce safety practices on the farm
• Understand FSMA Produce Safety Rule requirements
• Understand how to begin writing a Farm Food Safety Plan
For additional information about the PSA Grower Training Course and scheduled courses, please visit the PSA website and look for upcoming Grower Training courses under the Training tab.

**Produce Safety Alliance Train-the-Trainer (Advanced Level)**

2 Day or 4 Half-Day Course – This course will provide detailed information about Good Agricultural Practices (GAPs), co-management of natural resources and food safety, and FSMA Produce Safety Rule requirements. The course will also cover principles of adult education, how to incorporate the PSA curriculum into extension trainings, how to develop working partnerships, expectations for trainers, how to become a PSA Lead Trainer, and how to register a PSA Grower Training Course with the Association of Food and Drug Officials (AFDO).

**Trainer Prerequisite Knowledge**

Participants must take the PSA Grower Training Course as a prerequisite. In addition, individuals who want to become PSA Trainers or PSA Lead Trainers are expected to have basic knowledge in four competency areas including:

- Produce safety scientific knowledge and experience
- Fruit and vegetable production knowledge
- Effective training delivery
- Knowledge of the FSMA Produce Safety Rule

After attending the course, participants will be eligible to receive a certificate from the Association of Food and Drug Officials (AFDO) that verifies they have completed the PSA Train-the-Trainer course. Completing this training allows participants to deliver the PSA Grower Training curriculum under the direction of a PSA Lead Trainer. Any participant who has completed this training may also apply to become a PSA Lead Trainer. More detailed information about becoming a PSA Trainer or PSA Lead Trainer is available on the PSA website.

**Learning Outcomes**

- Understand microorganisms relevant to produce safety and where they may be found on the farm environment
- Identify microbial risks and potential routes of contamination, practices that reduce risks, and how to begin implementing produce safety practices on the farm
- Become familiar with the PSA Grower Training curriculum and resources
- Understand FSMA Produce Safety Rule requirements and their impact to fruit and vegetable growers
- Develop the skills necessary to deliver an effective PSA Grower Training to produce growers, packers, shippers, regulatory personnel, and others

For additional information about the PSA Train-the-Trainer Course and scheduled courses, please visit the PSA website and look for upcoming Train-the-Trainer courses under the Training tab.
Produce Safety Alliance Advanced Trainer Training Course

Tuition: $1,000 | June 14 – 16

3 Day Course – The Produce Safety Alliance Advanced Trainer Training Course has been developed to provide attendees with an in-depth scientific understanding of the FSMA Produce Safety Rule and help trainers enrich their PSA training skills. This workshop is a blend of lecture, hands-on activities, and breakout groups separated into six half-day modules:

• **Module 1**: Micro 101
• **Module 2**: Soil Amendments and Animals
• **Module 3**: Production Water
• **Module 4**: Sanitation
• **Module 5**: Postharvest Water
• **Module 6**: Instructor Tips for Participant Engagement

The curriculum development team, comprised of the Produce Safety Alliance and members of the Southern Center for FSMA training, developed this training to give participants an opportunity to perform hands-on activities. These experiential learning opportunities give participants first-hand experience with many of the practices that the FSMA Produce Safety Rule requires of growers.

**Trainer Prerequisite Knowledge**

Individuals must have attended the PSA Train-the-Trainer Course prior to attending this workshop.

**Course Registration**

The registration fee for the workshop is $1,000. The cost includes training materials (a printed manual and all materials for hands-on activities), lunch, refreshments, and a course certificate. Registration is limited to 30 participants.

For questions about registration, please contact Michele Humiston (mmc15@cornell.edu).

For any questions about the course content, please contact Donna Clements (dmp274@cornell.edu).

The National Good Agricultural Practices Program was established in 1999 with the goal to reduce microbial risks in fruits and vegetables by developing a comprehensive extension and education program for growers, packers, and farm workers. Since its inception, the National GAPs Program has had collaborative programs with collaborators in 34 states. National GAPs Program personnel have created many award-winning educational materials and training programs to support the effective implementation of food safety practices on the farm.

For More Information
The GAPs Program’s website is a user-friendly, universal portal bringing GAPs–related information together for growers, packers, farm workers, extension educators, scientists, state and federal government personnel, and other interested stakeholders.

Multi-Day Good Agricultural Practices (GAPs) Training Course

2–3 Day Course – This course provides a solid foundation of Good Agricultural Practices (GAPs) knowledge, time to support produce safety discussions, and opportunities for hands-on activities, including the development of a written Farm Food Safety Plan. Offered in collaboration with colleagues from Cornell Cooperative Extension’s Regional Teams, this course includes the PSA Grower Training curriculum, which satisfies the Food Safety Modernization Act (FSMA) Produce Safety Rule requirement outlined in § 112.22(c): ‘At least one supervisor or responsible party for your farm must have successfully completed food safety training at least equivalent to that received under standardized curriculum recognized as adequate by the Food and Drug Administration.’

The course is intended to improve growers’ understanding of GAPs and the FSMA Produce Safety Rule to guide the assessment of microbial risks and implementation of practices to reduce risks on fresh produce farms. On the second day of training, the knowledge growers gained on day 1 is utilized to write their own Farm Food Safety Plan using templates and sample record-keeping logs. A third optional day may be offered that includes a mock third-party audit hosted on one of the training participant’s farm. The mock third-party audit is conducted during the growing season so that participants can learn about the audit protocol and see produce safety practices in action.

After attending the course, participants will be eligible to receive a certificate from the Association of Food and Drug Officials (AFDO) that verifies they have completed the PSA Grower Training course.

Learning Outcomes

• Understand microorganisms relevant to produce safety and where they may be found on the farm environment
• Identify microbial risks and potential routes of contamination, practices that reduce risks, and how to begin implementing produce safety practices on the farm
• Understand FSMA Produce Safety Rule requirements
• Begin writing a Farm Food Safety Plan and develop written SOPs, record-keeping logs, and produce safety policies for your farm
• Understand third-party audits for produce safety

For additional information about Multi-Day Good Agricultural Practices (GAPs) Trainings in New York, visit the National Good Agricultural Practices Program website at: gaps.cornell.edu/person-gaps-trainings

Good Agricultural Practices (GAPs) Online Produce Safety Course

3-Week Online (Self-Paced) Course – The GAPs Online Produce Safety Course is a 3-week web-based course offered through the National GAPs Program. This course is intended to improve your understanding of GAPs to guide assessment of risks and implementation of practices to reduce risks on fresh produce farms. Taking this course will not result in your farm being “GAPs Certified.” GAPs
certification is done by a third-party (e.g., USDA, Primus, Global GAP) and involves the successful completion of an on-farm audit. This course does not include information about the Food Safety Modernization Acts (FSMA) Produce Safety Rule.

**Time Commitment**

Most students spend 15 to 20 hours on this course, but depending on your knowledge, more or less time may be required. Once the course opens, it is open 7 days a week, 24 hours a day for 3 weeks so you will be able to complete the course when time permits in your schedule. There are no required hours of participation. There is an instructor and the instructor may schedule office hours, but you are not required to attend these hours. You will be able to e-mail your instructor at all times during the course and they will respond in a timely manner. All course requirements must be completed within a three week window. Within the three weeks you are expected to:

- Complete a pre- and post-test
- Read all course materials
- Turn in 4 assignments for evaluation
- Complete 2 self-tests
- Contribute to the discussion boards
- Complete a course evaluation

**Course Scheduling and Class Size**

Courses run several times throughout the year. Please check the website for a current list of course offerings. Class size is limited to 25 people on a first-come, first-served basis. A minimum of 10 participants must be registered for us to offer the course. Special arrangements can be made for large groups to ensure everyone is in the same class together.

**Special Note**

As you consider taking the GAPs Online Produce Safety Training Course, be aware that this course is not currently equivalent to the required supervisor training described in the FSMA Produce Safety Rule 21 CFR Subpart C § 112.22(c). This GAPs Online Produce Safety Training Course may, however, satisfy training requirements as described in the FSMA Produce Safety Rule in §§ 112.21(a) and (b).

For additional information about the GAPs Online Produce Safety Course and scheduling classes, visit the National Good Agricultural Practices website at: gaps.cornell.edu/gaps-online-course
The Cornell Craft Beverage Institute (CCBI) was created in 2018 to join together Cornell's many fermented beverage outreach functions under one umbrella. A synergistic collaboration of extension programs in wine, beer, cider, distillates and fermented whey, CCBI offers training for industry members and consumers interested in all types of fermented and distilled beverage production. Areas of emphasis include:

- Grain and fruit fermentations
- Distillation techniques
- Analytical techniques
- Sensory science and evaluation methods
- Sanitation
- Tasting room strategies

The programs that make up CCBI offer technology transfer and expertise for specific beverage industries.

The Cornell Enology Extension Lab (CEEL) works with the wine industry to create educational programs that support the growth and improved quality of premium wines throughout the state. CEEL facilities include the Vinification & Brewing Technology lab, where fermentations are conducted in collaboration with research projects and applied trials; and the Cornell Craft Beverage Analysis Lab, where products may be submitted for troubleshooting, routine analysis or sensory appraisal.

The Cornell Brewing Extension Lab (CBEL) offers hands-on training to improve the quality of New York beer and brewing materials. CBEL is equipped with a service analysis facility offering testing for quality parameters such as hop harvest timing and beer off-flavor and spoilage detection. A new ½ barrel research brewery allows controlled production of beer as an applied research tool to test both raw materials and brewing processes. CBEL offers training for members of the brewing industry looking to refine their skillset, those seeking competitive qualifications for brewery employers, and offers introductory brewing concepts for new brewers.
The Cider Institute of North America (CINA) is a non-profit organization made up of passionate cider industry professionals and educators with a mission to create a quality-driven and sustainable cider industry through education and research. CINA teams with academic partners, including Cornell University (lead academic institution), Oregon State, Washington State and Brock University to offer a Foundation Course designed to develop concrete relationships with education partners to help producers better understand the opportunities and risks facing the industry as a whole. Cider Institute Certification is offered as an option to all students completing these programs, prompting the development of new talent within the industry.

Cornell has partnered with CARL Artisan Distilleries and Brewing Systems to present distilling workshops for more than ten years. CARL owner Alexander Plank, Technical Sales Manager Nicolas Haase and Cornell staff instruct attendees in lectures and practical demonstrations. With distillery installations at the teaching winery in Ithaca and in the Vinification & Brewing Laboratory at Cornell AgriTech in Geneva, the CCBI can hold workshops on either campus. This workshop traditionally features a visit to one of the commercial distilleries in the area on the first night of the workshop.

For additional information about services offered or to register for a course, visit the CCBI website: cals.cornell.edu/cornell-craft-beverage-institute

Meet the Team

Anna Katharine Mansfield, PhD  
Associate Professor  
akm87@cornell.edu | 315.787.2268  
Expertise: Wine production, sensory evaluation, flavor chemistry, fermentation nutrition

Christopher Gerling, MS  
Sr. Extension Associate  
cjg9@cornell.edu | 315.787.2277  
Expertise: Wine, cider, and distillate production

Sam Alcaine, PhD  
Assistant Professor

Extension Aide  
ckm53@cornell.edu | 315.787.2279  
Expertise: Cider production, beverage analysis
CEEL offers the EnoCert curriculum, a series of 1-2 day short courses which can be taken individually or in a variety of certificate tracks. EnoCert provides novices with wine production fundamentals, but also offers industry veterans courses in targeted topics of interest.

EnoCert 101: Introduction to Viticulture & Enology
Tuition: $350 | May 4 & 5

2 Day Course, Online – This course is designed for consumers and members of the wine industry who have little or no background in grape growing and winemaking. Participants will leave with a working knowledge of the core concepts of grape and wine production and a specific understanding of the opportunities and challenges inherent to cool-climate production regions.

During the first day, a series of lectures and group activities will cover vineyard site parameters, the components and function of grape vines and trellis systems, and the major threats to wine grape production. Viticultural instruction will culminate in a visit to a local vineyard showcasing several grape cultivars important to the region. On the second day, participants will explore production steps for specific wine types through lectures, group work, and sensory evaluation. Participants will learn processing variables for white, red, rosé wines, and will understand the key decisions required to influence wine style.

EnoCert 101 is the entry point for the EnoCert certification program, and is required for both the Harvest Technology and Tasting Room Educator certificates offered by the Cornell Enology Extension Laboratory. Participants may take this course as a stand-alone program, or as a component of the certificate curriculum. (Tuition for EnoCert 101, 201, and 203 together is $1,000.)

Learning Outcomes
• Grapevine structure and function
• Site selection parameters
• Trellis systems
• Grapevine pests and diseases
• Winemaking plans for specific wine types
• Wine processing parameters and decisions

EnoCert 201: Wine Sensory Analysis and Description
Tuition: $450 | May 12 & 13

2 Day Course, On-Campus – Attendees of this course will be guided through an in-depth exploration of their own sensory capabilities, and the ways in which their unique sensory perception influences their interactions with wine. Based on current sensory science, this course can serve as a starting point for
new wine industry members or to complement more traditional wine evaluation programs. The course is largely experiential, consisting of short lectures and related sensory exercises. Participants will start with exercises demonstrating the range and limitations of their own senses, including learning their own thresholds for important wine components, and their supertaster status. Further exercises will cover the concept of sensory balance in wines and identification of common wine flaws. Participants will then apply their skills in a series of benchmark tastings of significant wine types.

EnoCert 201 is a core course for the EnoCert certification program, and is required for both the Harvest Technology and Tasting Room Educator certificates offered by the Cornell Enology Extension Laboratory. Participants may take this course as a stand-alone program, or as a component of the certificate curriculum. (Tuition for EnoCert 101, 201, and 203 together is $1,000.)

**Learning Outcomes**
- Defining and differentiating between smell, taste, and ‘flavor’
- Thresholds for key wine aroma and taste components
- Components of wine mouthfeel
- Expert and novice use of wine descriptors
- Common wine types

---

**EnoCert 202: Tasting Room Sales Strategies**

**Tuition: $300 | May 11**

1 Day Course, On-Campus – This course is designed for current or prospective tasting room staff who are new to the industry or to the region. Most consumers' first contact with the New York wine industry is in a tasting room, so understanding their interests, motivations, and educational needs is key to promoting the industry as a whole and increasing individual winery sales. In this course, attendees will learn how to engage guests to create a fun and profitable tasting room experience. EnoCert 202 is the last course required for the Tasting Room Educator certificate offered by the Cornell Enology Extension Laboratory. Participants may take this course as a stand-alone program, or as a component of the certificate curriculum.

**Learning Outcomes**
- Common types of wine consumers
- Wine consumer buying habits
- Factors driving regional tasting room sales
- Building a positive consumer experience
EnoCert 203: Winery Safety and Sanitation

Tuition: $225 | May 18 – June 20

Online (Self-Paced) – This course is intended for all cellar personnel. Safety and sanitation are often overlooked in winemaking courses, but are essential to the production of high quality—and more importantly, legal—wines. In this digital learning course, participants will learn to identify and address safety hazards, the role of OSHA and other regulatory bodies, the difference between cleaning and sanitizing, and common areas of contamination in a winery setting.

EnoCert 203 is the final course required for the Harvest Technology certificate offered by the Cornell Enology Extension Laboratory. Participants may take this course as a stand-alone program, or as a component of the certificate curriculum. (Tuition for EnoCert 101, 201, and 203 together is $1,000.)

Learning Outcomes

- Winery safety regulations
- Personal safety issues
- Fundamentals of cleaning and sanitation
- Common microbial and chemicals hazards in the winery

Craft Brewing – Certificate Program

Live via Teleconference | For More Information Visit eCornell

Online (Zoom), 5 CEUs – The craft brewing industry provides more than 150,000 jobs in the United States alone and has been rapidly expanding for several years now. Whether you're looking to enter this growing field or are a home brewer, this certificate program will give you the skills you need to create and refine your own beer recipe. Throughout this program, you will have the opportunity to walk through a hands-on exploration of the four main ingredients used in beer production and their impact on the final product. Familiarity with high school-level chemistry, advanced high school-level algebra, and basic calculations will help you be successful in this program. After completing this program, you will be well equipped with the expertise and tools to develop, brew, and refine craft beer.

Learning Outcomes

- Investigate the characteristics of different malts to determine which is best for your recipe and beer style
- Explore the properties of hops and determine their impact on beer aroma and flavor
- Analyze the yeasts and microorganisms used in beer fermentation to achieve the desired flavor profile
- Evaluate water and its chemical makeup to create the appropriate water profile for your recipe
- Examine the nuances of ingredient interplay during the brewing process to refine the production of your recipe

Creating Craft Beverages

Live via Teleconference | For More Information Visit eCornell

Online (Zoom), 1 CEU – In recent years, craft beverages have become a multibillion-dollar industry, yet there's both an art and a science to the fermentation process that produces these beverages. Fermentation is about more than ingredients. The processes that the brewer, vintner, cider maker, and mead maker follow have an equally large impact on the final product – and small variations can make a big difference in the flavor profile. Using a scientific approach, you will design a craft beverage of your choosing. As you create a plan to produce the beverage, you will gain an understanding of the interactions between raw ingredients and processing steps which together influence the taste. You will then apply a systematic approach to tasting, using your senses to allow you to better articulate what you enjoy in a particular beverage as well as make specific recommendations to others.

Learning Outcomes

- Examine the fermentation process through hands-on experimentation
- Predict how yeast will behave based on available food and environmental conditions
- Design a craft beverage
- Taste and evaluate fermented beverages such as wine, beer, and cider using sight, smell, and taste in order to make informed recommendations
Cider Production – A Foundation

Tuition: $1,850 | Multiple Delivery Styles (Live via Teleconference or On-Campus)

January 12 – March 31 | Wednesdays, 7:00 pm (ET) | Zoom
April 14 – June 30 | Thursdays, 3:00 pm (ET) | Zoom
June 13 – 17 | On-Campus
September 1 – November 17 | Thursdays, 3:00 pm (ET) | Zoom

Hybrid Course – This course is designed to improve participants understanding of all aspects of cider. The focus of this course is to provide a basic understanding and appreciation of the main practices involved with cider and perry production and appreciation. The course consists of recorded lectures, cider tastings, videos, and live Zoom sessions.

The lectures will focus on historical development of the cider industry, orcharding, legal requirements, business marketing, fermentation management, and detailed step-by-step production processes. Practical training will cover yeast handling and establishment of fermentation. Online workshops will guide participants through product development; from raw materials to finished product. Tasting sessions will offer training in cider sensory analysis and development of organoleptic assessment notes for personal product portfolios, as well as an overview of cider flaws.

This course is also designed for individuals who wish to gain a recognized industry qualification, The Foundation Certificate in Cider and Perry Production. Passing an exam at the end of the course as well as completing a sensory analysis portfolio of six cider or perry products during the class can achieve this certificate.

Learning Outcomes

• Cider and Perry Production Methods
• Cider Quality/Sanitation
• Laboratory analysis
• Sensory analysis

Good Manufacturing Practice, Safety & Sanitation in Cider & Perry Production

October 3 – November 18

Online (Self-Paced) – How can you ensure that your product is safe for consumers? How can you ensure that your workplace is safe for employees? How can you ensure that your sanitation program is adequate to prevent spoilage? How can you prove any of the above to customers or government inspectors?

The modern marketplace and regulatory environment demands that cider and perry producers adopt documented, repeatable procedures to ensure that products and production environments are safe and
sanitary. Fortunately, there are a number of programs that have been developed with these specific issues in mind. This course offers an introduction to key quality, safety and sanitation terms and techniques, as well as the formal approaches that underpin modern food production. The online content will cover current Good Manufacturing Practices (cGMPs), preventive controls, occupational safety, sanitation and record-keeping. **This course is part of the Cider Institute of North America (CINA) Advanced Certificate in Cider & Perry Production: Core Module 1.2.**

**Learning Outcomes**

- Understand the importance of Good Manufacturing Practice (GMP), Quality Assurance (QA) & Quality Control (QC) in all aspects of the cider and perry production process to ensure product and process safety and quality.
- Have a fundamental knowledge and understanding about the principles, range and application of GMP, QA and QC systems and methods.
- Recognize and review the development and implementation of GMP operations throughout the whole cider and perry manufacturing process.
- Understand the importance and application of HACCP.
- Operate safe and effective working practices throughout the production of cider and perry.
- Understand the importance and effective application of sanitization and plant & equipment maintenance.
- Recognize the importance of good record keeping.

**Science, Practice & Quality Assured Cider & Perry Production**

**Tuition: $2,200 | December 5 – 9**

**5 Day Course, On-Campus** – Developed and taught by Peter Mitchell for CINA, this class builds on the Cider Production Foundation course and aims to cover, in depth, advanced theoretical aspects of cider and perry production. A key part of the class program involves undertaking a new product development project with an emphasis on developing marketing and production plans. **Prerequisite required: Foundation Certificate in Cider & Perry Production and/or extensive experience in cider production.**

**Learning Outcomes**

- Principles and practices of quality-assured production
- The microbiology and biochemistry of cider & perry production
- Principles of marketing & product development
- Selection, application and management of production processes and technologies
- Sensory evaluation
- Quality Assurance and Quality Control
Distilling Workshop

Tuition: $650

2 Day Course, On-Campus – This workshop is tailored to those currently active in, or contemplating entry into the distilled spirits industry, it addresses the basic principles of distilling production, marketing, and sensory analysis. The course consists of lectures, demonstrations, and spirit tasting sessions. Lectures will provide information about distillery design evolution, traditions, and concepts, as well as different technologies for brandies, eau-de-vie, grappa, whiskey, and rum. Participants will also learn about fermentation principles, properties of barrel aging, and business start-up considerations. Practical demonstrations of commercial stills will display informative processes for producing quality spirits, high-proof distillation-rectification, treatment of distillate, and continuous distillation technology. Though sensory analysis participants will evaluate examples of head, heart, and tail cuts as well as discover spirit flavor chemistry.

Learning Outcomes
• Basic distilling procedure
• Quality spirit production
• Spirit flavor chemistry

The Cornell Food Venture Center (CFVC) provides comprehensive assistance to new and established food entrepreneurs to enhance food safety, satisfy regulatory compliance and promote economic development. The center provides access to educational materials, workshops and direct assistance with process validation for safety and stability, and guidance in local, state and federal regulatory compliance, including:

- Analytical laboratory services for product safety and stability including pH, water activity, soluble solids and headspace composition
- Process Authority services and approval: Scheduled Process and Process Review validation and documentation for processed plant-based foods and meat products
- Reduced Oxygen Environment/Vacuum Packing safety evaluation
- Hazard Analysis and Validation
- Heat Penetration Studies
- Food Classification Letters
- Access to the Processing Pilot Plant
- Better Process Control School

The renovated Pilot Plant, focused on plant-based foods, has the valuable combination of established food processing and preservation technologies with new innovative equipment to promote the development of safe, healthy, high quality foods.

With the variety of equipment available, the pilot plant grants clientele the ability to make their final food product in the same location, from the starting ingredients to the packaged product. It also provides a uniquely supportive setting that allows manufacturers to compare different equipment and technologies to best address the final quality and stability (shelf-life) of the food product. Clients can determine the best manufacturing process to meet their needs prior to large-scale commercialization.

For additional information about services offered or to register for a course, visit the CFVC website.

Better Process Control School

Tuition: $360–$900 | 2 or 4 Day Course, Online Option

Acidified Only: 2 Day Course, Online | $360 (does not include cost of the book)
Acidified and Low Acid Foods: 4 Day Course | $500–$900 (includes cost of the book)

Hybrid Course – A training program for the processed food industry to prepare industry practitioners and help companies meet federal regulations. The course is beneficial to personnel in plants that pack and thermally process low-acid and acidified foods in hermetically sealed containers for shelf stable conditions. This includes canned foods, aseptically processed and packaged foods, and pickled products. Cornell University is part of the network of universities that deliver the Better Process Control School in partnership with the Consumer Brands Association (CBA) utilizing U.S. Food and Drug Administration (FDA) approved curriculum.

The FDA regulations in 21 CFR 108, 113, and 114 became effective May 15, 1979, requiring that each processor of low-acid or acidified foods operate with a certified supervisor on hand at all times during processing. These regulations are designed to prevent public health problems in low-acid and acidified canned foods. The BPCS course also meets U.S. Department of Agriculture's (USDA) Food Safety and Inspection Service (FSIS) regulations 9 CFR 318.300 and 381.300 for thermally processed meat and poultry products implemented on June 19, 1987. The BPCS subject areas include thermal processing system operations, microbiological food safety, sanitation, container handling, record keeping, equipment operations, acidification, and container closure evaluation programs for low acid and acidified canned foods.

The BPCS program is an important and valuable educational opportunity for mid-level managers and employees of food processing plants that utilize thermal processing. The course is an excellent platform to improve food safety training for food safety and quality assurance personnel, individuals who work with canned, aseptic and flexible packaged food products, academia, and government auditors and inspectors.

ON-CAMPUS  ON-SITE  ONLINE  ZOOM  HYBRID  PARTNERSHIP
eCornell Food Product Development Certificate Program

Online | For More Information Visit eCornell

5 Course Program – In this certificate program, you will be guided through the iterative process of bringing a new food product or innovation to market. You will proceed through the process of creating protocepts, conducting and incorporating consumer research, refining your initial concept, and determining how the product will meet safety requirements and quality expectations. Throughout the courses, you will also address the regulatory requirements associated with food products, investigate different manufacturing and production options, and create a framework for bringing your product to market. Each course includes a project in which you will have the opportunity to apply what you have studied to your own food idea. By the end of this certificate program, you will be able to navigate the science and business processes to successfully develop safe, high-quality food or beverage products.

The five course program is facilitated by an expert and is comprised of videos, read pages, activities, quizzes, and a comprehensive project for each course. You will interact with other members of your cohort and your teacher through discussion boards, office hours, and project feedback.

The certificate is made up of the following courses:

Market Research and Product Development

Many new food product and innovation ideas that make it to the market are ultimately unsuccessful, typically because their creators did not take the proper steps to ensure there was a sustainable market opportunity. In this course, you will assess the feasibility of new food product or innovation ideas. This will enable you to invest your time, money, and other resources in ventures with a possibility for success. You will also incorporate consumer research in order to create a food product or venture protocept. Finally, you will use this research to ensure that your protocept is appropriate to take to the next level of product development.

Food Safety and Quality

Food innovators often introduce new and exciting quality products to the food industry. While ensuring quality is consistent, food innovators must also ensure their products are safe and that they meet all federal and state safety standards. In this course, you will explore the different types of safety hazards that can exist in food products that can lead to human injury or illness. Using a hazard assessment tool, you will consider the full food production process and identify the potential physical, biological, and chemical hazards of a food product and how these potential hazards can best be prevented or controlled. Once you have determined the key quality attributes that should be defined for a food product, you will create an initial indication of the metrics for each. By the end of this course, you will be prepared to integrate both food safety and quality consideration into the decisions surrounding product formulation, processing method, packaging material, and product shelf-life.
Food Processing and Packaging

When envisioning the look and feel of your new food product packaging, it is important to consider not just the design but also the safety and quality needs associated with the food processing and packaging process. In this course, you will explore the different methods and techniques of food processing and packaging to determine which are appropriate for different food products. You will consider the numerous factors that contribute to a processing and packaging decision such as access, capital, feasibility, shelf-life, and market preferences. Leveraging these factors and more, you will be able to determine the appropriate methods for your food product or innovation and map out the specifications needed for your product prototype.

Regulatory Agencies and Food Regulations

The U.S. food industry is highly regulated at the federal and state levels. During this course, you will explore regulations associated with food industry innovations, identify applicable regulations to specific food ventures, and pursue regulatory compliance. This course will provide you with the opportunity to work through the process of identifying which overseeing agencies and regulations are applicable to a specific food project of your choice or for one provided by the faculty. You will create a plan for accessing resources for assistance and discover how to obtain non-regulatory certifications such as organic, fair trade, kosher, and halal. Upon conclusion of this course, you will be prepared to locate and address the regulations applicable to your food business.

Commercialization

The ultimate goal for a food product innovator or entrepreneur is to finally get their product to consumers. In this course, you will explore the food product commercialization process of bringing a prototype to market. This process has multiple steps, including development, production, and distribution. You will explore the components of an effective go-to-market strategy and how to determine pricing and product positioning. You will also discuss how suppliers can affect all elements of the go-to-market strategy. You will then consider how to scale up a process from test kitchen to commercial-level production. Through the course project, you will develop an initial go-to-market strategy for a product of your choice or for one of the provided sample products.
Juice HACCP commonly refers to the use of HACCP plans to minimize food safety risks in the juice processing, packaging, and transportation industries. HACCP stands for Hazard Analysis Critical Control Point. Significant hazards for a particular juice, puree, or concentrate are identified based upon scientific information. The steps at which these hazards can be controlled within the process are identified, and the critical limits at each of the key process steps are set. Monitoring procedures are implemented to evaluate conformance with these critical limits. The HACCP plan relies on extensive verification and documentation to assure that food safety has not been compromised. Thus, HACCP provides a structure for assessing risks or what could go wrong, and for putting the controls in place to minimize such risks.

Meet the Team

**Randy Worobo, PhD**
Professor, Microbial Food Extension Lab
rww8@cornell.edu
**Expertise:** Food safety, food microbiology, fruit and vegetable safety

Juice HACCP Certification Course

**Tuition: $500**

**1.5 Day Course** – Under the federal Juice HACCP rule published in 2001, juice processors must comply with two requirements: (1) Subpart A of the rule requires use of HACCP principles and systems in their operations; (2) Subpart B of the rule requires that processors implement treatment(s) to reduce a theoretical population of “pertinent” microorganisms in the juice by 99.999% or 5-log cycles. The “pertinent” microorganism is defined as the most resistant microorganism of public health significance that is likely to occur in the juice.
Juice processors that meet the definition of “retail” establishments are not covered by the federal juice HACCP regulation but must comply with other federal and state rules that regulate juice production. Retail establishments are manufacturers that prepare and provide all of their juice production directly to consumers and do not sell or distribute (wholesale) juice to other businesses.

**Juice HACCP Certification Course Includes:**

- Introduction to food safety and the HACCP system
- The regulation
- Hazards
- Prerequisites to HACCP
- Commercial processing example
- Hazard Analysis & Preventative Measures (Principle 1)
- Identification of Critical Control Points (Principle 2)
- Establishment of Critical Limits (Principle 3)
- Critical Control Point Monitoring (Principle 4)
- Corrective Actions (Principle 5)
- Verification (Principle 6)
- Record Keeping Procedures (Principle 7)
- Sources of info

Seafood HACCP is offered through NY Sea Grant and Cornell University. This course was developed through the Seafood HACCP Alliance and is recognized by the U.S. Food and Drug Administration (FDA) to meet the training requirements established under the FDA's mandatory seafood HACCP regulation (21 CFR Part 123). This regulation requires that the following HACCP activities be conducted by a “trained individual.”

- Developing a HACCP plan
- Annual reassessment of the HACCP plan
- Modifying the HACCP plan
- Performing a review of HACCP records

The course provides training for the seafood industry and regulatory agencies on the fundamentals of HACCP, the current Seafood HACCP regulation, introduction to guidance and training materials and the development of a HACCP plan for seafood products. There are two options for completing the Seafood HACCP Course: the Segmented Course, or the Basic Course (3 days).

Meet the Team

**Michael Ciaramella, PhD**  
Seafood Safety and Technology Specialist,  
New York Sea Grant,  
Cornell Cooperative Extension (CCE)  
mc2544@cornell.edu | 631.632.8730  
*Expertise:* Seafood Safety (HACCP), nutrition, quality and processing, GMPs, aquaculture and physiology

Seafood HACCP Course (Segment 1)

**Tuition:** $75* | Available in English and Spanish

**Online (Self-Paced)** – This course is taken at your own pace and on average takes 8–10 hours to complete. You will have 6 months from time of enrollment to complete. The Segment 1 online Seafood HACCP course is ongoing and one can register online at any time: seafoodhaccp.cornell.edu
Seafood HACCP | Course Information

Course is administered manually and enrollment/completions are processed Monday–Friday between 9:00 am and 4:00 pm excluding holidays.

---

**Seafood HACCP Course (Segment 2)**

**Tuition: $100+ (Dependent on Location and Size of Course)**

**On-Site** – The Segment 2 in-person course is offered at least twice a year (Spring and Fall). Dates will vary depending on room availability and location.

Note: Additional courses can be scheduled as needed. Basic and in-person segment 2 courses are typically offered in Jamaica, NY. If the need exists, the course can be offered throughout the state but pricing will vary depending on location. Contact the instructor to inquire about additional courses. The segment 2 course runs from approximately 8:30 am – 4:30 pm (EST).

**Learning Outcomes**

- General understanding of HACCP Fundamentals and seafood safety concerns/hazards
- Understanding of FDA’s current seafood HACCP regulation
- Utilize training and guidance materials available to develop a HACCP plan

---

**Basic Seafood HACCP Course**

**Tuition: $200+ (Dependent on Location and Size of Course)**

**3 Day Course** – This course is offered as needed. Dates will vary depending on need. Scheduled basic courses will be listed on the NY Sea Grant website (nyseagrant.org/seafood). If courses do not appear contact the instructor for more information and to request a basic Seafood HACCP course.

*Training materials for the course will cost an additional $45–$90.

Cured Meats Processing Workshop

2 Day Course, 2 CEUs – The Cured Meats Processing Workshop is designed for small-scale processors, restaurants, and butchers who would like to develop or increase their value-added section meat sales. Participants will learn the basics of curing meats, meat science, and non-meat ingredients. Lectures will include food safety, meat mathematics, thermal processing, and instrumentation. The course consists of two days of lectures and processing of cured meats.

Learning Outcomes
• Generate meat products based on knowledge acquired in course
• Apply food safety principles to creation of value-added meat products
• Discussion of meat science, meat mathematics, and instrumentation

Hazard Analysis Critical Control Point Programs for Meat and Poultry Processors (HACCP)

2 Day Course, 2 CEUs – This course covers the fundamentals of HACCP (Hazard Analysis Critical Control Point) and the application in meat and poultry processing operations. This course is certified by the International HACCP Alliance and meets USDA requirements for HACCP training. Training is a collaboration between Cornell Dairy Foods Extension and Penn State Extension. This training is intended for plant managers, HACCP coordinators, quality assurance/control personnel, sanitation management, line supervisors, line operators employed by meat and poultry processing plants, and professionals looking to increase their knowledge of HACCP.

Learning Outcomes
• Hazards associated with meat foods
• Prerequisite programs and GMPs

On-Campus Trainings take place at the Cornell University Stocking Hall Conference Center, unless otherwise noted. All courses listed are open to the public.*

On-Site Plant Trainings can be offered off campus at industry sites or virtually; courses at company sites can be limited to attendees from the hosting company.*

Online (Self-Paced) Trainings are completed online using eCornell or the Canvas Learning Management System.

Zoom Courses are hosted via live teleconference (Zoom).

Hybrid Courses include online as well as hands-on sessions.*

Partnership Courses are conducted in partnership with other organizations, including the New York State Department of Agriculture & Markets, Harvest NY, and Penn State.*

*Course delivery subject to change due to public health guidance from Cornell University.
The Cornell Dairy Foods Extension Certificate program offers comprehensive training for dairy processors of all sizes within New York State and beyond. In NYS alone, dairy manufacturing accounts for 23% of all agricultural manufacturing sales and 12% of employment, and relies heavily on in-state milk production from the farming sector. Dairy Foods Extension provides training and certificates in five areas including: (1) the Science of Yogurt and Cultured Dairy Products; (2) Fluid Milk Processing for Quality and Safety; (3) Membrane, Evaporation and Drying Technology; (4) The Science of Cheese Making; and (5) Ice Cream and Frozen Desserts. Courses aim to provide comprehensive basic training to dairy processors in vital topics such as milk quality and safety, dairy microbiology, Good Manufacturing Practices, unit operations, cleaning and sanitizing, food safety plans, audits, and state and federal regulations.

Meet the Team

**Martin Wiedmann, PhD**
Gellert Family Professor in Food Safety
mw16@cornell.edu | 607.254.2838
**Expertise:** Listeria monocytogenes, pre-harvest food safety, molecular pathogenesis, microbial ecology and epidemiology

**Robert D. Ralyea, MS**
Sr. Extension Associate
rdr10@cornell.edu | 607.255.7643
**Expertise:** General food security & risk assessment, dairy systems environmental microbiology, product processing & regulations, FSMA preventive controls for human food

**Sam Alcaine, PhD**
Assistant Professor of Dairy Fermentations
sda23@cornell.edu | 607.255.9183
**Expertise:** Dairy cultures & fermentation, antibiotic resistance in salmonella, GMPs, FSMA preventive controls for human food

**Aljoša Trmčić, PhD**
Extension Associate
at543@cornell.edu | 607.255.2894
**Expertise:** The transmission, control and detection of dairy associated spoilage microorganisms & pathogens

**Nicole Martin, PhD**
Associate Director, Milk Quality Improvement Program
nhw6@cornell.edu | 607.255.2894
**Expertise:** The transmission, control and detection of dairy associated spoilage microorganisms & pathogens

**Kimberly Bukowski**
Extension Professional
krb14@cornell.edu | 607.254.3313
**Expertise:** Dairy plant auditing, food safety systems, GFSI-Safe Quality Foods, GMPs, dairy manufacturing, FSMA preventive controls for human food
Dairy Foods | Meet the Team

Anika Gianforte, MPS
Dairy Processing and Marketing Specialist
adz8@cornell.edu | 585.813.3539
**Expertise:** Working with regulatory agencies/workforce development agencies & suppliers to assist members of the dairy foods community

Louise M. Felker
Extension Support Specialist
lmf226@cornell.edu | 607.255.7098
**Expertise:** Workshop/short course organization & planning, food safety systems, GMPs, social media/web development

Alex Solla, MFA
Extension Support Specialist
ahs24@cornell.edu | 607.255.3459
**Expertise:** Course coordination & data management

Maria Witlox
Program Aide
mpr13@cornell.edu | 607.255.6806
**Expertise:** Course coordination & data management
Registration and Confirmation

Please visit the Cornell Dairy Foods Extension website to register for courses: cals.cornell.edu/dairy-extension

Please contact Louise Felker (lmf226@cornell.edu) with any special payment circumstances prior to registering.

Cancellation Policy

Registration must be canceled by the close of business on the Friday two weeks prior to the start of the course in order to receive a full refund. Substitute registrations from the same company will be accepted at any time prior to the start of the course. No refunds will be given to individuals that fail to attend to their scheduled course.

Required Materials

All required course materials will be provided by Cornell University Dairy Foods Extension. Participants will be notified if the course requires use of a personal laptop computer during the hands-on sessions. Courses that include an online, self-paced portion require that the online materials be completed prior to the start of the hands-on workshop.

Certificate of Achievement

Attendees must sign in at the beginning of the workshop and attend all days of the workshop to qualify to receive a certificate of achievement. Attendees must also score a 70 or higher on the course post-test to pass the course and receive their certificate. One retake of the post-test is allowed per attendee.

Dairy Foods Certificate Program | Steps to Earning a Certificate

Core Courses

These courses are required to complete any chosen track for the specialized certificate programs. Dairy Science and Sanitation, a food safety course, and a pasteurizer course are required for Basic Certification. Pathogen Environmental Monitoring, SOP and Technical Writing, and Leadership Skills for Success are required for Advanced Certification.

Specialized Courses

Choose one specialized course per certificate:

• Science of Cheese (Basic & Advanced Levels Available)
• Science of Yogurt and Cultured Dairy Products (Basic & Advanced Levels Available)
• Fluid Milk Processing for Quality and Safety (Basic & Advanced Levels Available)
• Artisan Ice Cream and Frozen Desserts (Basic & Advanced Levels Available)
• Membrane, Evaporation, and Drying Technology

†Must complete 15 hours every 3 years for Basic Certification and/or Advanced Certification renewal.
Basic Dairy Science and Sanitation

Available in English and Spanish

Online (Self-Paced), 2 CEUs – The Dairy Science and Sanitation Workshop is tailored to dairy processing personnel and is designed to help participants understand the basic principles of dairy science and safety, as well as emphasize dairy processing establishment needs related to dairy sanitation to ensure that proper programs are conducted in their establishments.

The course consists of online lectures that cover basic dairy science, including composition of milk, dairy microbiology, dairy food safety, as well as an overview of dairy regulations. Participants will also learn the basics of cleaning and sanitizing principles, unit operations—both raw milk production and receiving, and dairy processing, plant equipment and design, general control of pathogenic and spoilage microorganisms, in depth information on cleaning and sanitizing chemicals, their properties and applications, and a discussion on CIP and COP systems and common errors seen in the industry.

Learning Outcomes

• Basic dairy microbiology/food safety overview
• Good manufacturing practices/dairy sanitation
• Milk composition and unit processing operations
• Dairy regulations/Food Safety Modernization Act

High Temperature Short Time (HTST) Pasteurizer Operator Workshop

Multiple Delivery Styles (Live via Teleconference or On-Campus)

3 Day Course, 3 CEUs – This workshop is designed for pasteurizer operators, but should be beneficial to all involved with milk pasteurization, including production, QA/QC and maintenance personnel. The course is instructed by industry experts and representatives from NYS Agriculture & Markets and provides an overview of the design, operation, cleaning and maintenance of HTST systems. All required regulatory tests for HTST pasteurizers will be discussed and/or presented in a hands-on format to meet the training requirements for performing HTST system testing under the NY State Broken Seal Policy. Information on HTST/UHT systems will be covered. Background in dairy microbiology, product safety & quality will also be provided.

Learning Outcomes

• HTST and UHT operation components
• Regulatory requirements for HTST operation
• Cleaning and sanitizing HTST programs
• Requirement as part of NYS Broken Seal Program
Dairy Foods | Core Courses

Vat Pasteurizer

Online (Self-Paced), 1 CEU – This course may be used to fulfill the pasteurization component requirements for the Dairy Foods Certificate Program in all certification tracks but can also be taken as an individual course by people interested in vat pasteurization methods, rules, and regulations.

Learning Outcomes
• Basic dairy microbiology/food safety overview
• Good manufacturing practices/dairy sanitation
• Milk composition and unit processing operations
• Dairy regulations/Food Safety Modernization Act

Advanced Core Courses

Environmental Monitoring Programs

Hybrid Course, 2 CEUs – This course will prepare participants to develop and implement an effective Pathogen Environmental Monitoring program that will achieve greater product safety and quality. The course will focus on pathogens of concern and the importance of environmental sampling programs. Potential sources of contamination will be identified and control steps outlined. Participants will work in small groups to develop an Environmental Monitoring Plan and discuss mitigation steps and corrective actions to control microbial contamination in a food processing facility.

SOP and Technical Writing

Multiple Delivery Styles (Live via Teleconference or Online, Self-Paced)

Hybrid Course, 2 CEUs – This course presents the process of writing and maintaining Standard Operating Procedures for both regulatory compliance and everyday employee usage.

Learning Outcomes
• Outline regulatory requirements
• Determine which processes to document
• Evaluate the relationship between process documents
• Identify the audience
• Explain systems, activities, and processes
• Tense and word choice
• Writing effective documents
• Review and revision process
• Document compliance
Leadership Skills for Success

Live via Teleconference

3 Half-Day Course, 2 CEUs – Master critical communication and leadership skills to effectively manage employees, establish priorities and delegate responsibilities while building awareness of team dynamics and how to engage employees through group problem-solving and decision making. Gain the commitment of others and add value to your organization by being clear about the results you want to achieve, the environment you want to create, and how you will develop and deploy talent. Become an effective leader with the ability to build relationships and manage workplace communications to be heard and understood by others while enhancing employee engagement and ensuring alignment and collaboration amongst members.

Specialized Courses (Basic & Advanced)

The Science of Cheese (Basic Level)

Hybrid Course, 2 CEUs – This workshop is designed for cheese manufacturers or others interested in the basic concepts of cheese making and is a required part of the Dairy Extension Basic Science of Cheese Certificate.

The course may also be taken as a stand-alone training. The course begins with an online lecture component covering the key areas related to vat pasteurization and basic cheese making techniques, cheese culture basics, milk defects, and cheese defects. The course will also include cheese making activities.

Learning Outcomes

• Foodborne pathogens resulting from unpasteurized milk
• Components of vat pasteurization
• Thermometer requirements
• Chart recorders and chart requirements
• Milk quality which impacts cheese making
• Cheese culture and chemistry and microbiology
• Cheese–making unit operations and techniques and hands-on cheese making

The Science of Cheese (Advanced Level)

2 Day Course, 2 CEUs – This workshop is designed for advanced level cheese manufacturers or others interested in the advanced concepts of cheese and is a required part of the Dairy Extension Advanced Science of Cheese Certificate.

The course may also be taken as a stand-alone training. The workshop will provide attendees with a review of information in key areas related to the complex chemistry of cheese, cheese styles and
standards of identity, advanced microbiology, advanced cheese problems and defects, and food safety challenges in the cheese industry. It is expected that the attendee has a variety of applied experience as this course is designed to test overall knowledge and problem-solving as it relates to cheese. This course assumes the attendee understands applied concepts and science as it relates to cheese before arrival.

**Learning Outcomes**

- Milk components and advanced chemistry of cheese
- Cheese styles and standards of identity
- Cheese defects during process and affinage

**The Science of Yogurt and Cultured Dairy Products (Basic Level)**

**Hybrid Course, 2 CEUs** – This workshop is designed for yogurt and fermented dairy product manufacturers and is a required part of the Dairy Extension Basic Yogurt and Fermented Dairy Products Certificate. The course may also be taken as a stand-alone training. The workshop will provide attendees with information in key areas related to milk quality and its impact on finished dairy products, product evaluation and defects, ingredients in cultured dairy products, and product processing and formulation.

**Learning Outcomes**

- Milk quality and impact on cultured dairy products
- Culture microbiology and hands-on cultured dairy making
- Unit operations and sanitation in cultured dairy production
- Formulation utilizing different ingredients

**The Science of Yogurt and Cultured Dairy Products (Advanced Level)**

**2 Day Course, 2 CEUs** – This workshop is designed for advanced level yogurt and fermented dairy product manufacturers and is a required part of the Dairy Extension Advanced Yogurt and Fermented Dairy Products Certificate. The course may also be taken as a stand-alone training. The workshop will provide attendees with information in key areas related to advanced microbiology, chemistry in fermented milk and dairy product production, along with advanced sensory product evaluation, safety and quality assurance.

**Learning Outcomes**

- Milk components and advanced chemistry of cultured-dairy making
- Innovations in cultured dairy production
- Advanced sensory characteristics
Fluid Milk Processing/Testing for Quality and Safety Workshop

**Hybrid Course, 2 CEUs** – This workshop is designed for those involved and/or interested in fluid milk processing and testing with the intent of providing the tools to support and improve on quality assurance/control and food safety programs for bottled milks. While the course design assumes participants have some prior knowledge of dairy microbiology and processing (e.g., Dairy Science & Sanitation Course), critical concepts will be reviewed and expanded on for those who do not have prior knowledge.

**Learning Outcomes**
- Basic microbiology in relation to milk quality and safety
- Influence of raw milk quality on pasteurized milk quality and shelf-life
- Fluid milk processing parameters
- Tools for assessing milk quality and shelf-life

Membrane Filtration, Evaporation, and Drying Technology

**2 Day Course, 2 CEUs** – This workshop is designed for those involved and interested in the fractionation, separation, concentration, and drying of dairy products and ingredients. Quality, processing, food safety and cleaning are aspects of the courses. While the course design assumes participants have some prior knowledge of dairy processing, critical concepts will be reviewed and expanded on for those who do not. This course can be taken as a stand-alone program.

Introduction to Artisan Ice Cream and Frozen Desserts

**Hybrid Course, 2 CEUs** – This course is designed for the artisan ice cream manufacturer and will focus on select types of frozen desserts, including their composition and physical properties, ingredients, sensory, as well as equipment and the manufacturing process.

**Learning Outcomes**
- The composition of ice cream and origin of the ingredients within the food system
- The physical and chemical changes that occur during ice cream production
- The equipment involved in making ice cream and product development
- The sensory properties of ice cream
Accredited HACCP Training Course

Available in English and Spanish

Online (Self-Paced), 2 CEUs – This course is designed for individuals who have responsibility for building, maintaining, and updating plant HACCP programs that will meet customer and third-party requirements. This course is accredited under the International HACCP Alliance and is designed to meet the requirements set for GFAI, NCIMS, FSIS, and the FDA.

Implementing SQF Systems Course

3 Day Course – This workshop is designed to give participants an understanding of the SQF Code, how to implement requirements in food production, manufacturing, storage, distribution, or packaging to achieve or maintain SQF Certification. It is required that students have completed a HACCP Course of at least 16 hours prior to taking this course.

Artisan Dairy Food Safety Plan Coaching

Hybrid Course, 2 CEUs – This coaching workshop is intended for Artisan Dairy Food Producers who are preparing to create, or are already developing, a FSMA compliant preventive control (PC)-based food safety plan for their facility. The goal of this workshop is to provide Food Safety Plan review and coaching sessions that guide attendees through each step in development process. PCQI lead trainers will be present to review topics and answer questions. Templates (digital and paper) will be provided to facilitate plan development, attendees are encouraged to bring their current or in-progress plans.

Note: This course is NOT intended to provide PCQI certification, it is strongly recommended that attendees complete an FSPCA PCQI certification course or similar program before attending this workshop. Attendees are also encouraged to enroll and complete the Food Safety for Artisan/Farmstead Cheesemakers prior to taking this workshop. The link to this online training will be provided upon registration.
Applied Food Safety Plans – An Advanced Refresher Course

2 Day Course, 2 CEUs – This course is designed for anyone that has had HACCP and/or PCQI training and has worked in a role that has been part of a Food Safety team in a plant environment.

Most third-party auditing schemes recommend that HACCP and/or PCQI training be updated every 5 years. This course will meet these criteria. The other benefit of this course is a more advanced understanding of Food Safety Plans. The goal of this workshop is to explain and clarify the differences between programs that your facility may have already had as prerequisite programs (i.e., Allergen programs, Sanitation programs, etc.), and the “new” expectations of Preventive Controls that are required by FSMA.

The workshop will include a hands-on group activity that includes a risk analysis and a group discussion on best practices. We will also address how to perform a thorough Root Cause Analysis and Food Safety Culture including strategies to implement it in your facility.

Successful completion of this workshop will provide attendees with a review of the tools necessary to build a new or update outdated HACCP/Food Safety Programs.

This course will be taught by Lead Instructors trained by the FSPCA, SQF, and HACCP Alliance. The attendees will earn a certificate that will meet third-party requirements for training.

Regulatory Courses

FSMA Preventive Controls Qualified Individual Training*

Multiple Delivery Styles (Live via Teleconference or On-Campus)

3 Day Course, 2.5 CEUs – The Current Good Manufacturing Practice, Hazard Analysis, and Risk-Based Preventive Controls for Human Food regulation is intended to ensure safe manufacturing/processing, packing and holding of food products for human consumption in the United States. The regulation requires that certain activities must be completed by a preventive controls qualified individual who has successfully completed training in the development and application of risk-based preventive controls. This course developed by the FSPCA is the standardized curriculum recognized by FDA; successfully completing this course is one way to meet the requirements for a preventive controls qualified individual.

These courses are taught by Lead Instructors trained by the FSPCA, who have been instructed in how to teach the FDA-recognized standardized curriculum.

*Course description provided by the Food Safety Preventive Controls Alliance
Intentional Adulteration Vulnerability Assessments (IAVA)

1 Day Course – This course will provide participants with the knowledge to implement the requirements of conducting a vulnerability assessment under the Mitigation Strategies to Protect Food Against Intentional Adulteration (IA) regulation of the U.S. Food and Drug Administration (FDA). This regulation is one of a number of regulations and guidance that implement the provisions of the 2011 Food Safety Modernization Act (FSMA), which focuses on safe food practices.

The Mitigation Strategies to Protect Food Against Intentional Adulteration regulation (referred to as the IA rule) is aimed at preventing intentional adulteration from acts intended to cause wide-scale harm to public health, including acts of terrorism targeting the food supply. The regulation requires that certain activities must be completed by a “food defense qualified individual” who has successfully completed training in the conduct of a vulnerability assessment. This course developed by the FSPCA is the “standardized curriculum” recognized by FDA; successfully completing this course is one way to meet the requirements for a “food defense qualified individual” responsible for conducting a vulnerability assessment. These courses are taught by Lead Instructors trained by the FSPCA, who have been instructed on how to teach the FDA-recognized standardized curriculum.

Foreign Supplier Verification Programs

Live via Teleconference

2 Day Course, 2 CEUs – This course will provide participants with the knowledge to implement the requirements of the “Foreign Supplier Verification Programs (FSVP) for Importers of Food for Humans and Animals” regulation of the U.S. FDA. This regulation is one of a number of regulations and guidance that implement the provisions of the 2011 Food Safety Modernization Act (FSMA), which focuses on safe food practices. This course is designed for U.S. based importers who meet the definition of “importer” in the FSVP rule, which includes those who own or are the consignee of food at the time of entry, or, if no owner or consignee exists, the U.S. agent or representative of the foreign owner. Others who have an interest in ensuring that the requirements of the FSVP rule are met, including brokers, exporters, foreign suppliers of food that will be exported to the U.S., persons/business owners who currently buy food from foreign sources, and representatives of foreign governments.

The FSVP curriculum was designed by regulatory, academia, and industry professionals and developed with funding from FDA as part of the FSPCA. In contrast to the Preventive Controls rules, the FSVP rule does not require you to attend a training program following a “standardized curriculum” recognized by FDA. Attending this course, however, will help you understand the FSVP requirements and how those requirements can be met in your particular circumstance. These courses are taught by Lead Instructors trained by the FSPCA, who have been instructed on how to teach the FDA-recognized standardized curriculum.
Dairy Foods | Regulatory Courses

Dairy Processing Plant Superintendent

1 CEU – Annual update provides dairy plant personnel with regulatory and extension updates. Offered at 4 locations each spring. Required update for all NY State Dairy Processing Plant Superintendents (PPS).

Dairy Laboratory Regional Workshops

1 CEU – Provides dairy laboratory personnel with regulatory, procedural and scientific updates.

Certified Milk Inspectors Training School

2.5 CEUs – Provides detailed instruction of required dairy farm inspections and is a required course for Certified Milk Inspectors (CMI), those who inspect dairy farms. Offered once each summer.

Certified Milk Inspectors Annual Update

Provides regulatory and extension updates on farm inspection & milk quality. Offered at 4 locations each fall. Required update for licensed Certified Milk Inspectors (CMIs).

New York State Fair Dairy Judging and Awards Program

Provides dairy plants the opportunity to receive awards and recognition for product quality at New York State Fair. Coordination and judging of dairy products for state fair competition occurs each summer at Cornell.
In addition to our Regulatory and Certificate program Training Courses, we also offer a selection of specialty courses in both food safety topics and advanced level hands-on training programs.

**Dairy Basics**

Four hour in-plant training in Milk Chemistry, Dairy Science, and Dairy Sanitation.

**Cheese Grading**

**1 Day Course** – This course will focus specifically on cheddar and mozzarella grading in accordance with USDA standards. USDA experts will discuss the USDA standards for grade, cheese defects as well as hands-on exercises with defective cheeses. This is an opportunity to compare and calibrate your skills with actual federal graders. The course is designed for people who currently grade or would like to learn how to grade cheese.

**Food Safety Principles**

**Available in English and Spanish**

**Online (Self-Paced) –** This introductory course is tailored to processing personnel and is designed to help participants understand the basic principles of food safety in a processing plant. The benefit of using this course is to quickly train your frontline employees in the importance of Food Safety.

The half-day (four hour) course consists of self-paced online modules with knowledge checks at the end of each module that will cover basic food safety including Good Manufacturing Practices, Basic Microbiology and Foodborne Illness, and Food Safety Programs. The course is ideally suited for:

- Production line personnel
- Sanitation personnel
- Maintenance Personnel

This course provides baseline knowledge and is not intended to be a comprehensive training. We are offering this course based on a subscription price. Companies are granted access to the course through Canvas for the designated time purchased. Companies have unlimited access to the content and can train unlimited employees through the subscription period. Contact Louise Felker (lmf226@cornell.edu) for subscription pricing information.

**On-Campus Trainings** take place at the Cornell University Stocking Hall Conference Center, unless otherwise noted. All courses listed are open to the public.*

**On-Site Plant Trainings** can be offered off campus at industry sites or virtually; courses at company sites can be limited to attendees from the hosting company.*

**Online (Self-Paced) Trainings** are completed online using eCornell or the Canvas Learning Management System.

**Zoom Courses** are hosted via live teleconference (Zoom).

**Hybrid Courses** include online as well as hands-on sessions.*

**Partnership Courses** are conducted in partnership with other organizations, including the New York State Department of Agriculture & Markets, Harvest NY, and Penn State.*

*Course delivery subject to change due to public health guidance from Cornell University.*
Industry Workshops (On-Site or Virtual)
Contact Louise Felker (lmf226@cornell.edu) for price quote and scheduling.

• Dairy Science & Sanitation (2.5 days)
• Preventive Controls Qualified Individual (2–2.5 days)
• HACCP Training (2 days)
• GMPs Training (2 days)
• Internal Audit Training (1 day)
• Sensory Training (1 day)
• Food Defense Training (2 days)
• Foreign Supplier Verification Programs Training (1.5 days)

Consulting Services
Contact Louise Felker (lmf226@cornell.edu) for price quote and scheduling.

Dairy Process Authority
Dairy Process review and validation available for dairy products. Fees charged for initial review, research, and on-site review. Submission options include the following:

• Product and Process Review/ Scheduled Process
• Reduced Oxygen Packaging (ROP)/ Vacuum Packing
• Lab Analysis
• Deviation Evaluation

Cornell's Process Authority works with food manufacturers to validate products for safety and stability. The Scheduled Process is a document that can be submitted to regulatory agencies, such as state or federal inspectors, to support safe food processing practices and ensure minimal risk of microbial pathogenic growth.

Pre-Audit Consulting
Preparing for a third-party audit and want to make sure that you're ready? Our team can visit your facility and conduct pre-audit consulting.

Document Review
Food safety plan and document review available, on-site and remotely.

Validation Sampling
Validation sampling of environmental monitoring programs available.
The Cornell University Food Processing and Development Laboratory (FPDL) is a highly flexible pilot plant that allows industry access to equipment and expertise to facilitate the development of new dairy products and/or to produce prototype products on a small-scale. The ‘plug and play’ design means that the FPDL can emulate your plant processing parameters for accurate product development projects while the company can get product trials completed without stopping actual production. Because the facility is a licensed dairy plant permitted by NY State, our products can be used for sensory or consumer acceptance studies.

The 6,000 sq. ft. main processing area is directly adjacent to Cornell’s fully licensed dairy plant. The pilot plant houses a small-scale HTST system capable of continuous pasteurization of batches as small as 100 gallons with up to a 12 minute extended hold. The facility has multiple cheese vats from 50–500 gallon capacities (with associated equipment such as cheddar milling equipment, cheese presses, a variety of moulds, etc.). For yogurt and cultured products production, the facility has a Greek yogurt separator, fermentation vats from 50-500 gallons, several filling capabilities as well as fermentation rooms to 110°F. The FPDL has continuous and batch ice cream freezing capability as well as a walk-in hardening freezer (~40°F). The pilot plant also has access to very high-quality milk from Cornell’s Vet School farm located less than a mile away. This combination allows for scaling up of production in order to provide a variety of products for consumer demonstrations, food shows and exhibitions.

The facility has experienced full-time staff professionals who are able to assist in all aspects of food product development and processing. Companies/individuals can visit the facilities and work collaboratively or the staff of the FPDL can process products to your specifications and ship it to you overnight. Customized small product development runs can be conducted with our established access to suppliers of ingredients, cultures and raw materials or if a company prefers, with their supplied ingredients.

For more information visit the FPDL website or contact Robert Ralyea (rdr10@cornell.edu) with questions.
CIFS Industry Partnership Program

From Agriculture to Food Processing and Packaging to Retail

Companies from across the food value chain, from Agriculture to Food Processing and Packaging to Retail, are joining Cornell Institute for Food System’s Industry Partnership Program (CIFS-IPP) to gain access to a series of benefits, research opportunities and services to give themselves an edge in the otherwise very competitive food industry. By engaging with Cornell University faculty (in particular, the CIFS Faculty Fellows), as well as peers throughout the food industry, corporate members have the opportunity to be part of a multidisciplinary network focused on solving food systems challenges from a variety of perspectives.

CIFS-IPP Offers its Members and Affiliate Members Opportunities to:
- Foster research and educational collaborations between leading university and industry scientists
- Participate in forums for networking between industry scientists, business leaders, and Cornell faculty
- Facilitate the translation of cutting-edge food systems research from academia to industry
- Provide opportunities to engage with Cornell students and build a talent pipeline

CIFS-IPP Members and Affiliates:
- Receive invitations to the CIFS Annual Symposium and other events to learn about emerging technologies and product opportunities currently being pursued by Cornell faculty and their students
- Receive monthly news updates as well as early notification of new collaborative research opportunities
- Receive facilitated access to Cornell faculty for high-level discussion of strategic research issues
- Engage with 200+ Cornell students in food systems disciplines to build a robust and diverse talent pipeline
- Receive facilitated access to Cornell food science processing facilities and services
- Receive recognition of their support via the CIFS-IPP website and printed materials as well as logo displays in Stocking Hall
- Network with world-renowned food science scholars and other industry leaders to form partnerships with representatives from many of the world’s premiere food and beverage companies
CIFS-IPP | Meet the Team

CIFS-IPP Member Companies

CIFS-IPP’s success derives from the extensive collaboration between Cornell University’s stellar research talent and our industry colleagues, including researchers, engineers, and business leaders. We are pleased to take this opportunity to honor and recognize the corporate members of CIFS-IPP for their dedication to advancing food science and technology.

Full Members:

• ADM
• Aptar CSP Technologies (new – 2021)
• Beech-Nut Nutrition Company
• Gallo Family Vineyards
• HP Hood
• International Flavors & Fragrances
• The Kraft Heinz Company (new – 2021)
• Nestlé Health Science
• PepsiCo
• Wegmans Food Markets

Affiliate Members:

• Campbell Soup Company
• Chr. Hansen
• LanzaTech (new - 2022)
• Reckitt Benckiser Group (new - 2021)
• Siena Development Group
• We Are the New Farmers (new - 2022)
